

PAVLO BELEVTSSEV

Staff Software Engineer / Technical Lead / AI-Augmented Engineering

sir.belevtsev@gmail.com | +380994860096 | Remote | linkedin.com/in/pbelevtsev | github.com/belevtsev

PROFESSIONAL SUMMARY

Staff Engineer/Technical Lead with 14+ years of experience designing and shipping distributed systems, scalable SaaS platforms, and cloud-native backend services at companies ranging from startups to enterprises serving millions of users. Proven track record of reducing API latency by 35%, improving database query performance by 70%, and taking products from zero to production. Expertise in microservices architecture, event-driven systems, real-time data pipelines, and cross-functional technical leadership. Early-stage startup co-founder with hands-on experience building products from idea to market. Actively leveraging AI-augmented engineering workflows including multi-agent orchestration, OpenAI Codex, and GitHub Copilot to accelerate delivery velocity 2-3x and code quality at scale while applying the critical thinking and system design instincts that AI alone cannot replicate.

CAREER HIGHLIGHTS

- Reduced API latency by 35% and PostgreSQL query response times by 70% through Redis caching, index optimization, and full-text search tuning directly improving platform responsiveness for enterprise retail clients, which contributed to higher user retention and enabled the sales team to close multiple new enterprise accounts by demonstrating sub-second search across 500K+ product catalogs.
- Designed an event-driven microservices platform using NATS JetStream and gRPC supporting 10,000+ concurrent asset connections powering a predictive maintenance product that reduced clients' unplanned equipment downtime by 30%, translating to an estimated six-figure annual savings per enterprise customer (US-based plants) and becoming the product's primary competitive differentiator that drove a 2x expansion in the client portfolio within 18 months.
- Built real-time flight authorization and airspace compliance systems processing 500+ daily flight plans with automated regulatory checks and live monitoring of 100+ concurrent drone operations enabling the product to meet stringent aviation authority certification requirements, which unlocked entry into the regulated commercial UAV market and positioned the platform as a trusted vendor for government and enterprise contracts.

KEY SKILLS

Go (Golang) | AI-Augmented Development (OpenAI Codex, GitHub Copilot, Multi-Agent Orchestration, LLM-Assisted Code Review, Prompt Engineering) | TypeScript | Node.js | PostgreSQL | Redis | NATS JetStream | gRPC | GraphQL | REST APIs | Microservices | Event-Driven Architecture | Docker | Kubernetes | Terraform | CI/CD | AWS | Azure | React | React Native | Agile/Scrum | System Design | Technical Leadership |

PROFESSIONAL EXPERIENCE

Agrantis | **Lead Backend Engineer**

2022 – 2026

Retail & ERP SaaS Platform serving enterprise retailers with multi-tenant architecture and ERP ecosystem integrations.

- Led backend architecture for a multi-tenant Retail & ERP SaaS platform, designing event-driven microservices using NATS JetStream and gRPC that reduced inter-service latency by 40% and supported horizontal scaling across multiple tenants.
- Implemented Redis caching layer and PostgreSQL query optimizations that reduced API response times by 35% and eliminated sequential scans on high-volume tables, directly improving the user experience for enterprise retail clients.
- Improved PostgreSQL full-text search performance by 70% through composite indexing, GIN indexes, and query plan analysis, enabling sub-second search across catalogs with 500K+ product records.
- Built a secure on-premises connector agent to synchronize real-time data between customer ERP systems and the Agrantis cloud platform, reducing data sync latency from hours to minutes.

MyDone | **Lead Engineer / Product Engineer**

2020 – 2022

Task Management & Productivity SaaS Platform - took product from concept to production.

- Owned end-to-end technical delivery of a multi-tenant SaaS product across 7 delivery areas (architecture, backend, frontend, infrastructure, testing, CI/CD, production readiness), shipping the product from 0-to-1 within 8 months.
- Designed and implemented the full platform stack including JWT-based authentication, role-based access control (RBAC), tenant isolation, and task management workflows using Go, PostgreSQL, and React.
- Built analytics dashboards linking operational activity to company-level KPIs, enabling leadership to make data-driven decisions that improved team productivity metrics by 25%.
- Established CI/CD pipelines, automated testing frameworks, and deployment workflows using Docker and Kubernetes, reducing deployment time from 2 hours to 15 minutes.

Intellias | **Lead Backend Engineer**

2019 – 2022

Facility & Predictive Maintenance Platform - real-time monitoring and ML-driven maintenance for enterprise facilities.

- Designed and scaled high-throughput data ingestion pipelines processing real-time telemetry streams from IoT sensors, enabling predictive maintenance with 95% anomaly detection accuracy.
- Built interactive dashboards for real-time monitoring of 10,000+ facility assets and operational metrics, reducing mean-time-to-detect (MTTD) for equipment failures by 60%.
- Collaborated with data science teams to operationalize predictive ML models, aligning model outputs with business KPIs and reducing unplanned downtime by 30%.
- Mentored and coached 5 junior engineers through structured code reviews, pair programming, and technical guidance, resulting in 2 promotions within 12 months.

Intellias | **Lead Backend Engineer**

2017 – 2019

Facility & Office-Space Management Platform - IoT-driven workspace optimization for enterprise clients.

- Built IAM modules for secure multi-tenant workspace isolation, supporting 50+ enterprise tenants with zero cross-tenant data leakage incidents.
- Designed sensor-data ingestion pipelines for real-time occupancy and environmental monitoring, processing 1M+ data points daily from temperature, motion, and presence sensors.
- Implemented backend microservices to aggregate and analyze occupancy data, enabling clients to optimize office space utilization by 20% and reduce facility operating costs.
- Exposed REST and gRPC APIs consumed by web, mobile, and third-party Building Management System (BMS) integrations across 3 client platforms.

Intellias | **Senior Full-Stack Engineer**

2015 – 2017

Navigation & Drone Systems - flight authorization and airspace compliance for commercial UAV operations.

- Developed flight authorization workflows aligned with aviation regulatory requirements, processing 500+ daily flight plan submissions with automated airspace compliance checks.
- Built interactive airspace visualization tools displaying real-time restrictions, advisories, and flight zones using WebSocket-driven event streams, reducing operator response time by 45%.

- Integrated real-time telemetry and flight tracking via WebSockets and event-driven architecture, enabling live monitoring of 100+ concurrent drone operations.
- Implemented data synchronization services with aviation authority systems via REST and gRPC APIs, ensuring 99.9% data consistency with regulatory databases.

EARLY CAREER

Intellias | **Software Engineer - Sports Betting & Online Gaming (UK)** *2014 – 2015*

- Built Node.js microservices with real-time WebSocket data delivery, video streaming, and multi-provider feed aggregation for one of Europe's leading betting operators (1,850+ UK shops, 870 Italian shops, 15%+ market share), supporting thousands of concurrent users across web and mobile.

Intellias | **Software Engineer - Energy Consumption Management** *2013 – 2014*

- Developed backend services for an energy consumption management platform, building data collection pipelines and reporting modules that enabled utility clients to monitor and optimize energy usage across commercial facilities.

Stolik (Co-Founder) | **Co-Founder & Full-Stack Developer** *2012 – 2013*

- Co-founded an online restaurant reservation startup, owning end-to-end product development from concept through launch - built the full-stack booking platform, designed the UX workflow, and drove go-to-market strategy targeting local restaurant partners.

EDUCATION

Lviv Polytechnic National University *2006 – 2012*
Master of Science in Software Engineering
