PROFESSIONAL SUMMARY

Go backend and platform engineer with 14+ years building distributed systems, multi-tenant SaaS platforms, and secure on-premises integrations. I build Go backends for complex business domains, with faster data access and dependable operations. I take ownership of services, components, and features, from design and delivery to production operations, including investigating failures and seeing fixes through. I've worked in enterprise teams with strict review and approval processes and in startups, including my own, where priorities change quickly and time to market comes first. I use AI-assisted development and review tools, including Claude and Codex, while retaining ownership of engineering decisions and verification.

KEY SKILLS

Go (Golang) | AI-Augmented Development (Claude, Codex, Multi-Agent Orchestration, LLM-Assisted Code Review, Prompt Engineering) | TypeScript | Node.js | PostgreSQL | PostGIS | S3 | Redis | NATS JetStream | gRPC | Protobuf | QUIC | mTLS | PKI | OpenTelemetry | Prometheus | WebSockets | GraphQL | REST APIs | Microservices | Event-Driven Architecture | Docker | Kubernetes | Terraform | CI/CD | AWS | Azure | React | React Native | Agile/Scrum | System Design | Technical Leadership

Domains: Commerce & ERP | Agriculture | AI Infrastructure | IoT & Telemetry | Aviation & Airspace | Productivity SaaS | Location-based Social

PROFESSIONAL EXPERIENCE

NOL8 | **Senior Backend Engineer** *2026 – Present*

AI infrastructure and secure data processing.

- Built Go gateway and runtime control components for a data processing platform.
- Implemented gRPC streaming and QUIC transport for on-premises deployments, with ordered streams, backpressure, and cancellation.
- Implemented machine identity and certificate lifecycle management using mTLS and PKI, including enrollment, renewal, and rotation.
- Built customer-site agents with runtime configuration and recovery. Integrated OpenTelemetry Collector for metrics and logs.

Agrantis | **Lead Backend Engineer** *2022 – 2026*

Led backend architecture for multi-tenant commerce and enterprise resource planning (ERP) services, covering catalogs and orders, invoices, and ERP integration.

- Led a backend team building event-driven Go microservices on NATS JetStream and gRPC, reducing inter-service latency by 40% and supporting horizontal scaling across tenants.
- Reduced API response times by 35% through Redis caching and PostgreSQL optimization. Eliminated sequential scans on high-volume tables.
- Improved full-text search performance by 70% through query-plan analysis and index tuning. Added composite and GIN indexes, enabling sub-second search across catalogs with 500K+ product records.
- Built a secure on-premises connector agent using gRPC streaming to synchronize real-time data between customer ERP systems and the cloud platform, reducing data sync latency from hours to minutes.
- Delivered high write throughput through asynchronous ingestion and queued writes using NATS JetStream. Built denormalized read models on authoritative normalized source data, maintaining consistency through transactional or asynchronous updates.
- Built farmer and consultant workflows for lab results, feed recommendations, and private document exchange.

MyDone (own startup) | **Lead Engineer / Product Engineer** *2020 – 2022*

Delivered a multi-tenant task-management product from concept to production in 8 months, owning architecture, backend implementation, and delivery.

- Designed and implemented the full platform stack including JWT-based authentication, role-based access control (RBAC), tenant isolation, and task management workflows using Go, PostgreSQL, and React.
- Built analytics dashboards linking operational activity to company-level KPIs. This enabled leadership to make data-driven decisions that improved team productivity metrics by 25%.

- Established CI/CD pipelines, automated testing frameworks, and deployment workflows using Docker and Kubernetes, reducing deployment time from 2 hours to 15 minutes.

Intellias | **Lead Backend Engineer (Contract)** *2019 – 2022*

Facility & Predictive Maintenance Platform – real-time monitoring and ML-driven maintenance for enterprise facilities.

- Designed an event-driven microservices platform using NATS JetStream and gRPC supporting 10,000+ concurrent asset connections. Scaled its ingestion of real-time IoT sensor telemetry for predictive maintenance.
- Built interactive dashboards for real-time monitoring of 10,000+ facility assets and operational metrics, reducing mean-time-to-detect (MTTD) for equipment failures by 60%.
- Collaborated with data science teams to operationalize predictive ML models, aligning model outputs with business KPIs and reducing unplanned downtime by 30%.
- Mentored and coached 5 junior engineers through structured code reviews, pair programming, and technical guidance, resulting in 2 promotions within 12 months.

Intellias | **Lead Backend Engineer** *2017 – 2019*

Facility & Office-Space Management Platform – IoT-driven workspace optimization for enterprise clients.

- Built IAM modules for secure multi-tenant workspace isolation, supporting 50+ enterprise tenants with zero cross-tenant data leakage incidents.
- Designed sensor-data ingestion pipelines for real-time occupancy and environmental monitoring, processing 1M+ data points daily from temperature, motion, and presence sensors.
- Implemented backend microservices to aggregate and analyze occupancy data, enabling clients to optimize office space utilization by 20% and reduce facility operating costs.

Intellias | **Senior Full-Stack Engineer** *2015 – 2017*

Navigation & Drone Systems – flight authorization and airspace compliance for commercial UAV operations.

- Built real-time flight authorization and airspace compliance systems processing 500+ daily flight plans with automated regulatory checks and live monitoring of 100+ concurrent drone operations.
- Built interactive airspace visualization tools displaying real-time restrictions, advisories, and flight zones using WebSocket-driven event streams, reducing operator response time by 45%.
- Implemented data synchronization services with aviation authority systems via REST and gRPC APIs.

EARLY CAREER

Intellias | **Software Engineer – Sports Betting & Online Gaming (UK)** *2014 – 2015*

- Built Node.js microservices with real-time WebSocket data delivery, video streaming, and multi-provider feed aggregation. Served thousands of concurrent users for a leading European betting operator.

Intellias | **Software Engineer – Energy Consumption Management** *2013 – 2014*

- Developed backend services for an energy consumption management platform, building data collection pipelines and reporting modules that enabled utility clients to monitor and optimize energy usage across commercial facilities.

Stolik | **Co-Founder & Full-Stack Developer** *2012 – 2013*

- Co-founded an online restaurant reservation startup. Built the full-stack booking platform and drove go-to-market.

SELECTED PROJECTS

- **Freelance:** Built Go services for location-based social discovery, profiles, and user-generated content. Exposed federated GraphQL and gRPC APIs across service boundaries. Implemented PostGIS search for privacy-aware nearby activity. Built media uploads, image variants, and asynchronous object cleanup using S3.
- **Open source:** Built agent-workflows, a Go-based manager for reusable engineering skills and agent configuration on macOS and Linux. Implemented installation, validation, updates, and rollback for a consistent AI-assisted engineering workflow. https://github.com/belevtsev/agent-workflows

EDUCATION

Lviv Polytechnic National University | Master of Science in Software Engineering *2006 – 2012*
